

Renault Laguna Window Regulator Parts to Send & Damage Check

The following is a list of the parts making up the regulator to send for repair. Generally the unit will be removed almost complete, so I'll highlight the parts that you have to watch out for.

It's always an idea to check inside the bottom of the door once the unit is out paying particular attention to the parts below.

Parts Check

1. Complete Unit

This is pretty much the whole thing, including the motor on the back.

Yours will most likely have the parts hanging off/fell off due to snapped cable.

2. Tensioners x2

There are 2 of these, each comprising;

- White housing
- Black cable end
- Spring

These have the habit of dropping off and falling into the door. Ensure you don't lose them as [the unit cannot be repaired without them!](#)

Lost springs are ok, and a missing black cable end is not the end of the world, but the original parts make for a better repair.

3. Cable Seating (Grey Plastic)

This will probably still be in place either on the frame or on the end of the cable.

This sometimes comes off and drops in the door so again have a good look.

4. Slide Clips (Blue Plastic) x2

There are 2 of these.

They should be still on the frames.

Sometimes they are snapped as circled, however this damage can be repaired.

Damage Check

1. Pulley Wheel

These photos are as-is from a regulator that came in for repair, showing the damage to the pulley. In this case it's not too bad and is fully repairable.

Before sending in your regulator it'd be an idea to email me photos from the same angles to assess if it's good to repair or not.
